Feature Overview

This mock sprint feature is a restyled login page that leads into a simple team page. It is being built to practise the team's full BA -> UX -> Dev -> Testing -> PM sign-off workflow before the real client project work begins.

The team page will introduce FieldCapture Team B by showing each member's name, photo, role, and short blurb.

Purpose

This document gives UX, Dev 1, Dev 2/testing, and PM a shared BA reference. UX designs from it, Dev builds from it, Dev 2 tests against it, and PM uses it for final sign-off.

Scope

In-scope

- Restyle the existing login page so it looks intentional, readable, and responsive.
- Keep the existing email/password login form visible and usable.
- Redirect or lead the user to the team page according to the existing mock sprint flow.
- Build a team page showing each member's name, photo, role, and short blurb.
- Handle missing images and long text without breaking the layout.

Out-of-scope

- Changing authentication logic, password rules, backend auth, or session behaviour.
- Building real FieldCapture inspection, incident reporting, offline sync, or dashboard features.
- Adding new user-management functionality beyond the boilerplate task requirement.

User Story

As a team member reviewing the mock sprint artifact, I want to log in and see a styled team page, so that the team can demonstrate a complete design, development, testing, and sign-off workflow.

Acceptance Criteria

- Login page has updated styling and does not look like unfinished boilerplate.
- Email and password fields remain visible, readable, and usable.
- Existing login validation/error behaviour remains visible after restyling.
- Login work is styling-only: no authentication logic or session behaviour is changed.
- Successful login or mock sprint flow leads to the team page.
- Team page displays each member's name, photo, role, and short blurb.
- Team page includes Kim Khanh Do, Kai Jie Yee, Pierre Tan, and Khanh Nguyen Hoang Quoc.
- Missing or broken photos use a placeholder/default image.
- Long names, roles, and blurbs wrap or truncate cleanly without overlap.
- Pages are readable and usable on desktop and mobile screen sizes.

Assumptions & Edge Cases

Assumptions

- The login page already exists in the boilerplate.
- The mock sprint team page may use static team content unless Dev safely wires another source.
- Final member photos and blurbs can be updated by each member before PM sign-off.

Edge Cases

Edge Case	Expected Behaviour
Missing/broken photo	Show a placeholder/default image.
Long name/role/blurb	Wrap or truncate cleanly; no overlapping cards or text.
Small mobile screen	Stack content clearly and keep form fields/buttons usable.
Login error	Keep existing error feedback visible after restyling.

Roles & Responsibilities

Role	Responsibility
BA	Define requirements, scope, acceptance criteria, validation/display rules, and edge cases. Share handoff with PM and UX.
UX	Design the login styling and team page layout against the BA requirements.
Dev 1	Build the team page and login-to-team-page flow according to the approved design and requirements.
Dev 2 / Testing	Test the feature against acceptance criteria and report issues. Devs must not test their own code.
PM	Track Planner card completion, confirm checklist items, and sign off last.

Sign-off

This feature is considered Done when every acceptance criterion is checked, the feature is deployed or linked, this BA requirements document is linked from the Planner card, testing has been completed by a non-author developer, and PM has completed final sign-off.

Role	Name	Signature / Date
BA	Kai Jie Yee	
Dev	Pierre Tan / Khanh Nguyen Hoang Quoc	
PM	Kim Khanh Do	

Planner Handoff Text

DONE: Completed BA requirements for the login styling and team page content. Defined team page fields, validation/display rules, login styling-only scope, and edge cases.

DELIVERABLE: Link this completed BA Requirements document from the Planner card.

NOTE FOR THE NEXT ROLE: Login work is styling-only. Do not change authentication logic or session behaviour. Team page must show each member's name, photo, role, and short blurb. Missing photos, long names, long roles, and long blurbs should be handled without breaking the layout.
